# OUR STORY

Established in 1978, GK Joinery Ltd started in a small workshop in Locking Hill, Stroud with a simple mission - to manufacture purpose-made, premium timber products.

The business was quick to earn the trust of local homeowners and tradesmen with our quality craftsmanship and outstanding service. Over 40 years on, we continue to pride ourselves on maintaining this reputation. In fact, the majority of our work still comes from customer referrals. This demonstrates the trust our customers place in us to deliver the highest quality products and customer service - which they say set us apart.

This local family-owned business has gone from strength to strength, investing in our workshop, employees and the latest technology without compromising on traditional aesthetics or craftsmanship. This allows us to continue our mission of making long-lasting, quality timber products that meet today's high standards.

"Our trust in GK was fully endorsed - outstanding service from first meeting to after fitting check."

Gus Grimshaw, Oak Conservatory

# Part Q

## Security Rated Doors & Windows

On the 1st October 2015 Part Q was introduced to England building regulations. This means that anyone building a new home needs to ensure that all easily accessible doors and windows must comply with certain security performance requirements as specified in PAS 24:2012.

Through the Joinery Network, we're proudly licenced and able to supply quality, Part Q compliant windows and external doors which have been tested at an approved test centre and will satisfy building control security guidelines.

If you have a new build project or are looking to enhance your home security, then please contact us for your free quotation.

The Joinery Network cascade test certificate to  
**G K Joinery Limited**

This certificate conforms to the following test evidence: -

PAS24  
2016

Enhanced security performance requirements for doorsets and windows in the UK

BS6375-1  
2009

Performance of windows and doors Part 1: Classification for weathertightness

Document  
Q

Security – Dwellings, Windows and Doors

Document  
LB1

Compliance to Conversion of fuel and power in existing dwellings. Thermal U-value 1.4W/m<sup>2</sup>K

Document  
M

# SLIDING SASH WINDOWS

Sliding sash windows offer a timeless elegance to a property, whether it's for a new build or an older property.

Don't let cold wind and rattling keep you up at night. Our windows offer peace of mind with modern draft seals and fittings improve performance and energy efficiency

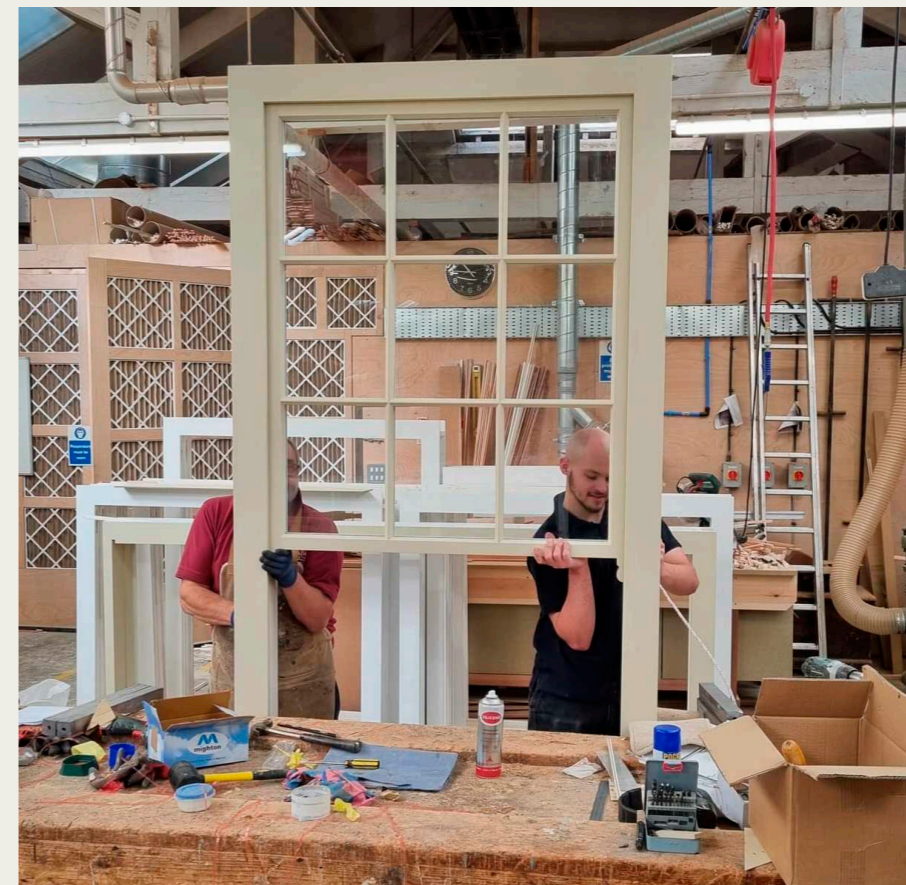

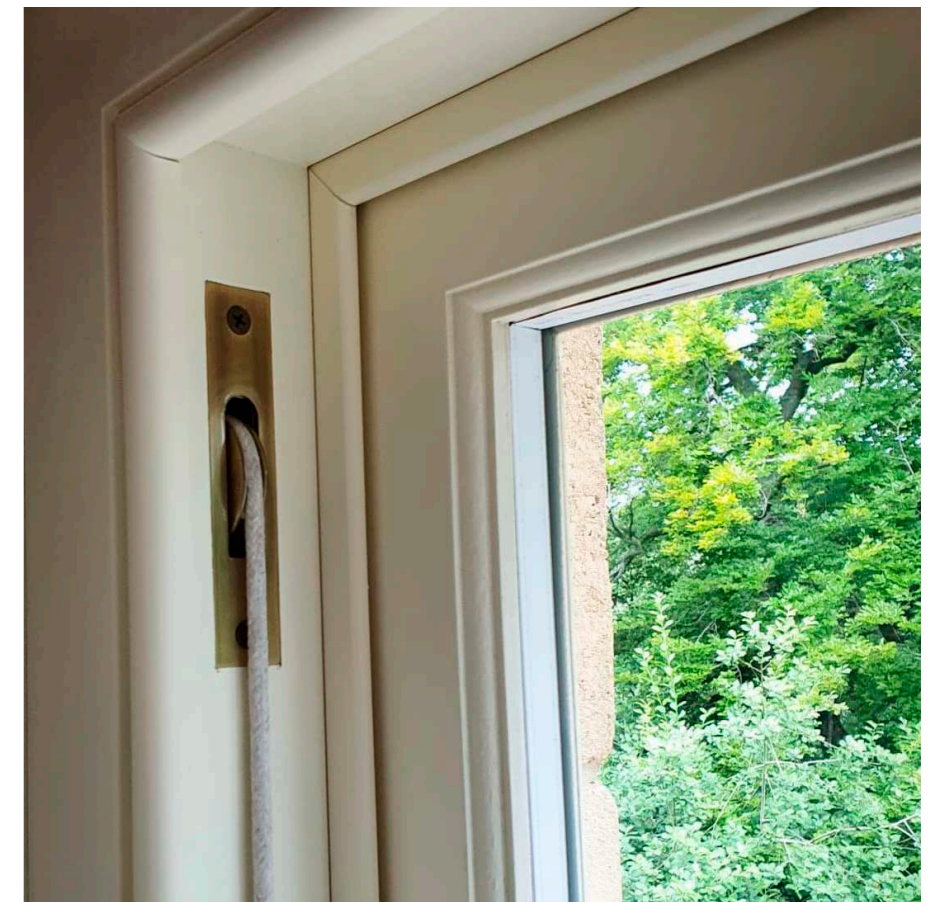

The weights and pulleys sliding sash window ensures the traditional character and charm of a period building is maintained, whilst incorporating the latest advances in timber window technology.

We offer both spiral balance or cord and weight mechanism.

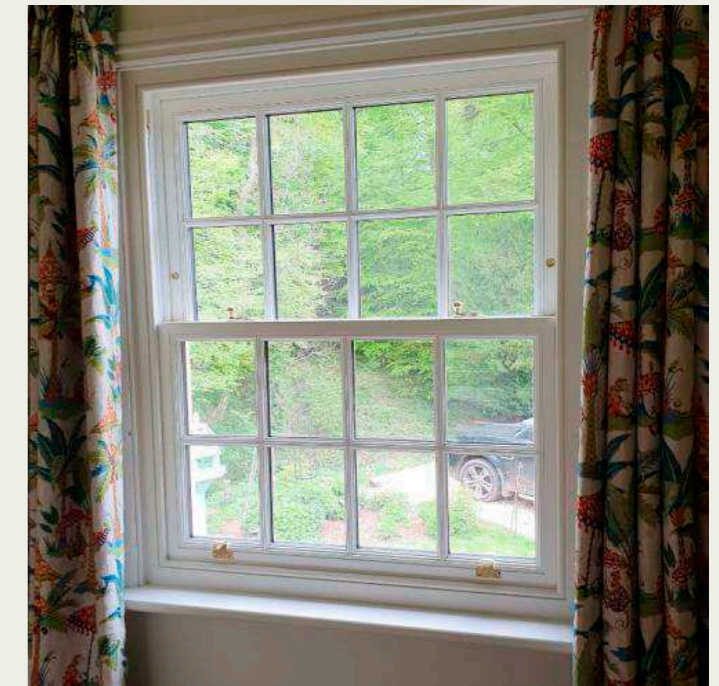

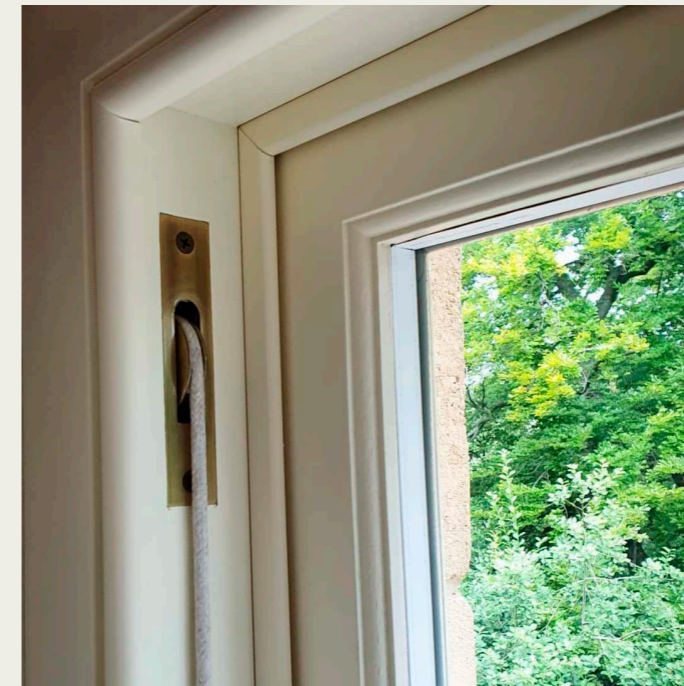

The spiral balance is a modern-day alternative to the classic box sash window, reproducing the original charm and character of an English sash window with a friction-based method of operation. A great option where a smaller frame is required.

# Screen & Shade Systems

There's no denying bi-folds and other large doors transform your home. How else can you achieve such luxurious open plan living that lets you connect seamlessly with the outdoors?

## Shades

Luxury shade fabrics available in exterior, light-filtering and blackout with a choice of stylish patterns and a range of colours to suit every home.

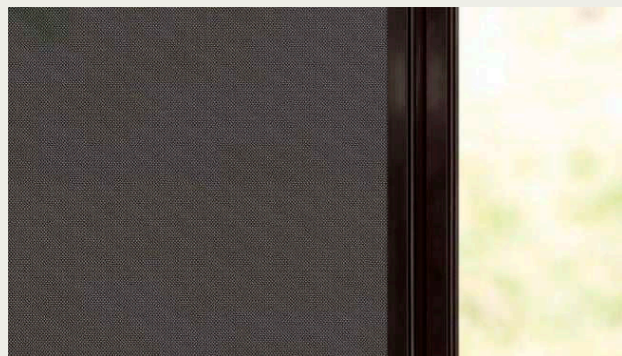

### Light-filtering

This translucent blind material allows natural light inside while protecting from harsh sun and glare during the day and provides homeowners with a degree of privacy in the evening.

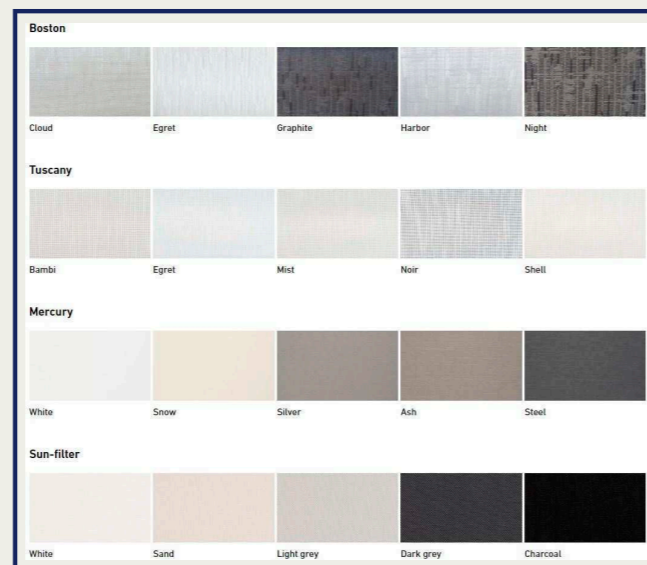

### Blackout

Our blackout shade is room-darkening, excluding light and providing complete privacy when drawn.

### Sun-filtering

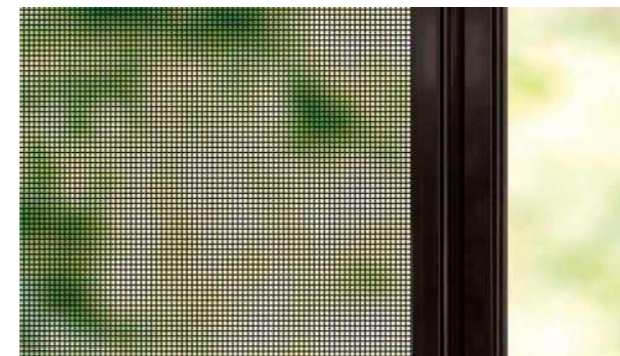

Perfect for reducing glare, solar heat gain and fading. Can be fitted internally or externally but a popular choice for outside given its hard-wearing, easy-clean qualities.

When planning a renovation or new build it's easy to be distracted organizing your beautiful bi-folds or sliding doors - but what will you do when you need a little privacy? How will you manage sun glare or control insects? Centor's award-winning S4 Screen & Shade System - with retractable insect screens and shades - takes care of that for you. Our unique products are built into the wall, meaning screens and shades are there when needed and hidden when not.

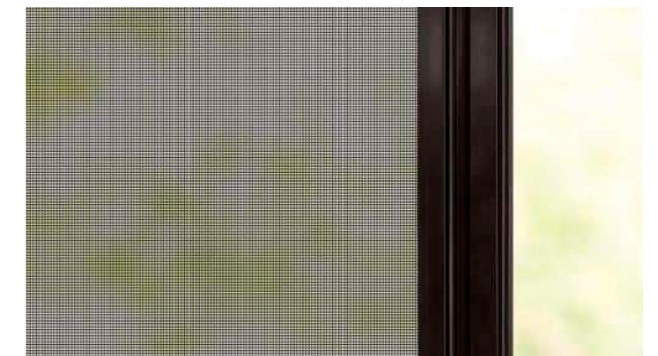

## Insect screens

Choose between two types of mesh and enjoy fresh air and an evening breeze without the inconvenience of insects. The mesh also acts as an anti-glare sunshade on bright, sunny days.

### Standard weave

Our standard weave screen keeps insects like moths, flies and mosquitoes outside, while standing the test of time with a durable polyester/PVC mesh construction.

### Tight weave

Our tight weave mesh is made from the same durable material as our standard weave, but features a smaller aperture to protect homeowners from tiny insects like midges.

# Bespoke & Heritage Items

We have worked on a number of listed buildings, where matching the existing design to maintain the heritage of the building is a top priority.

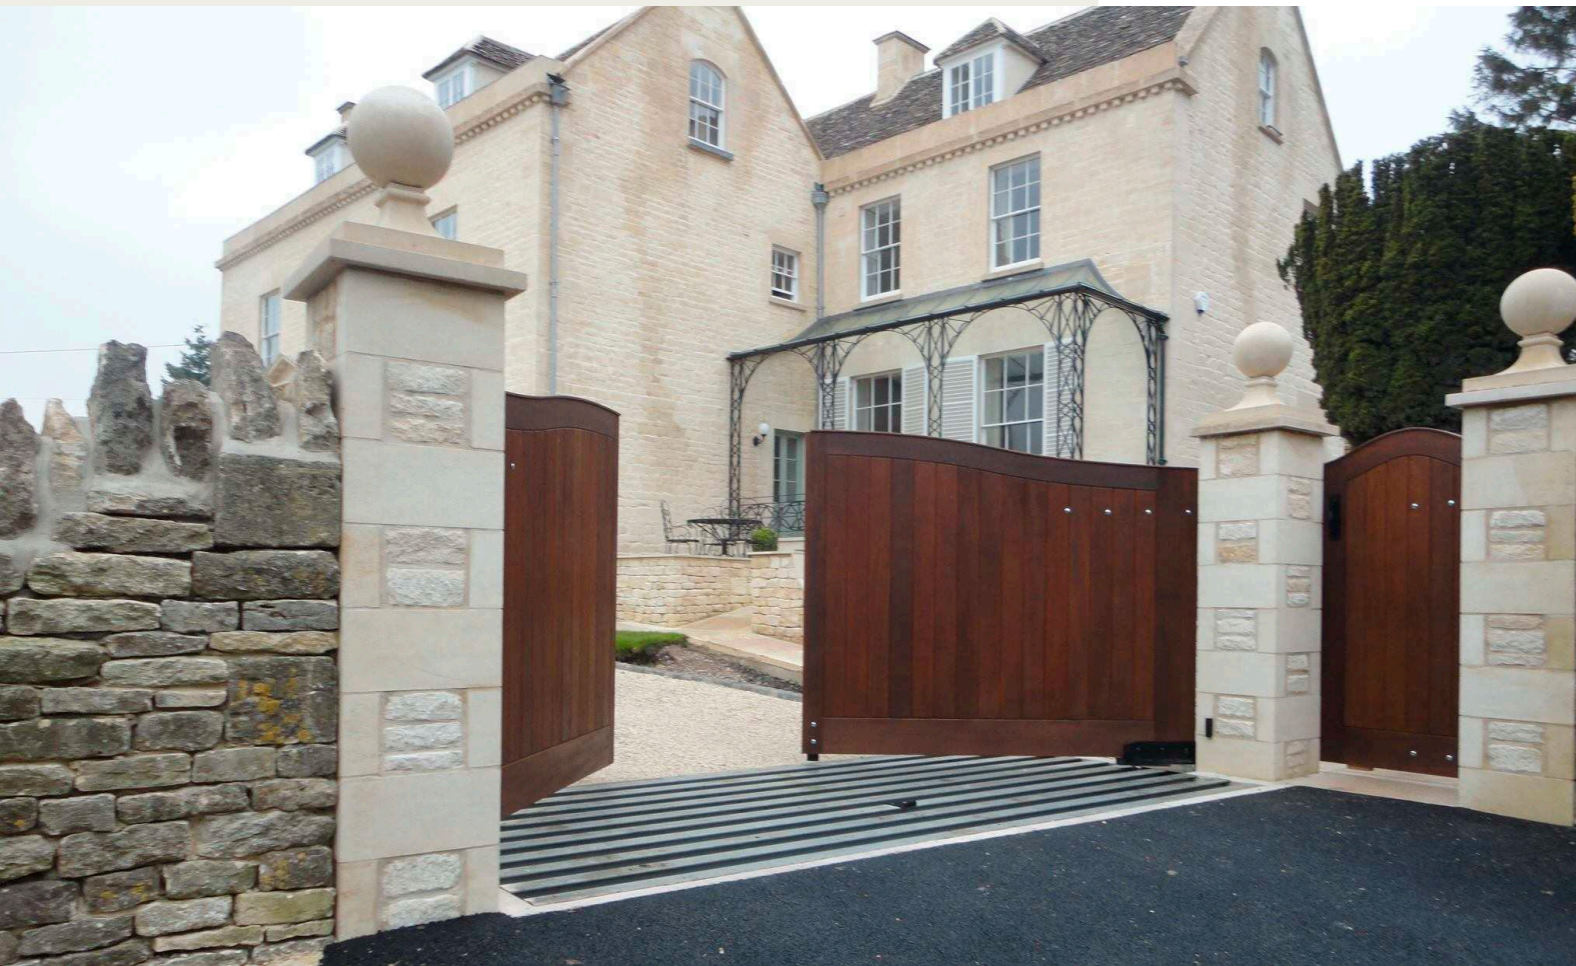

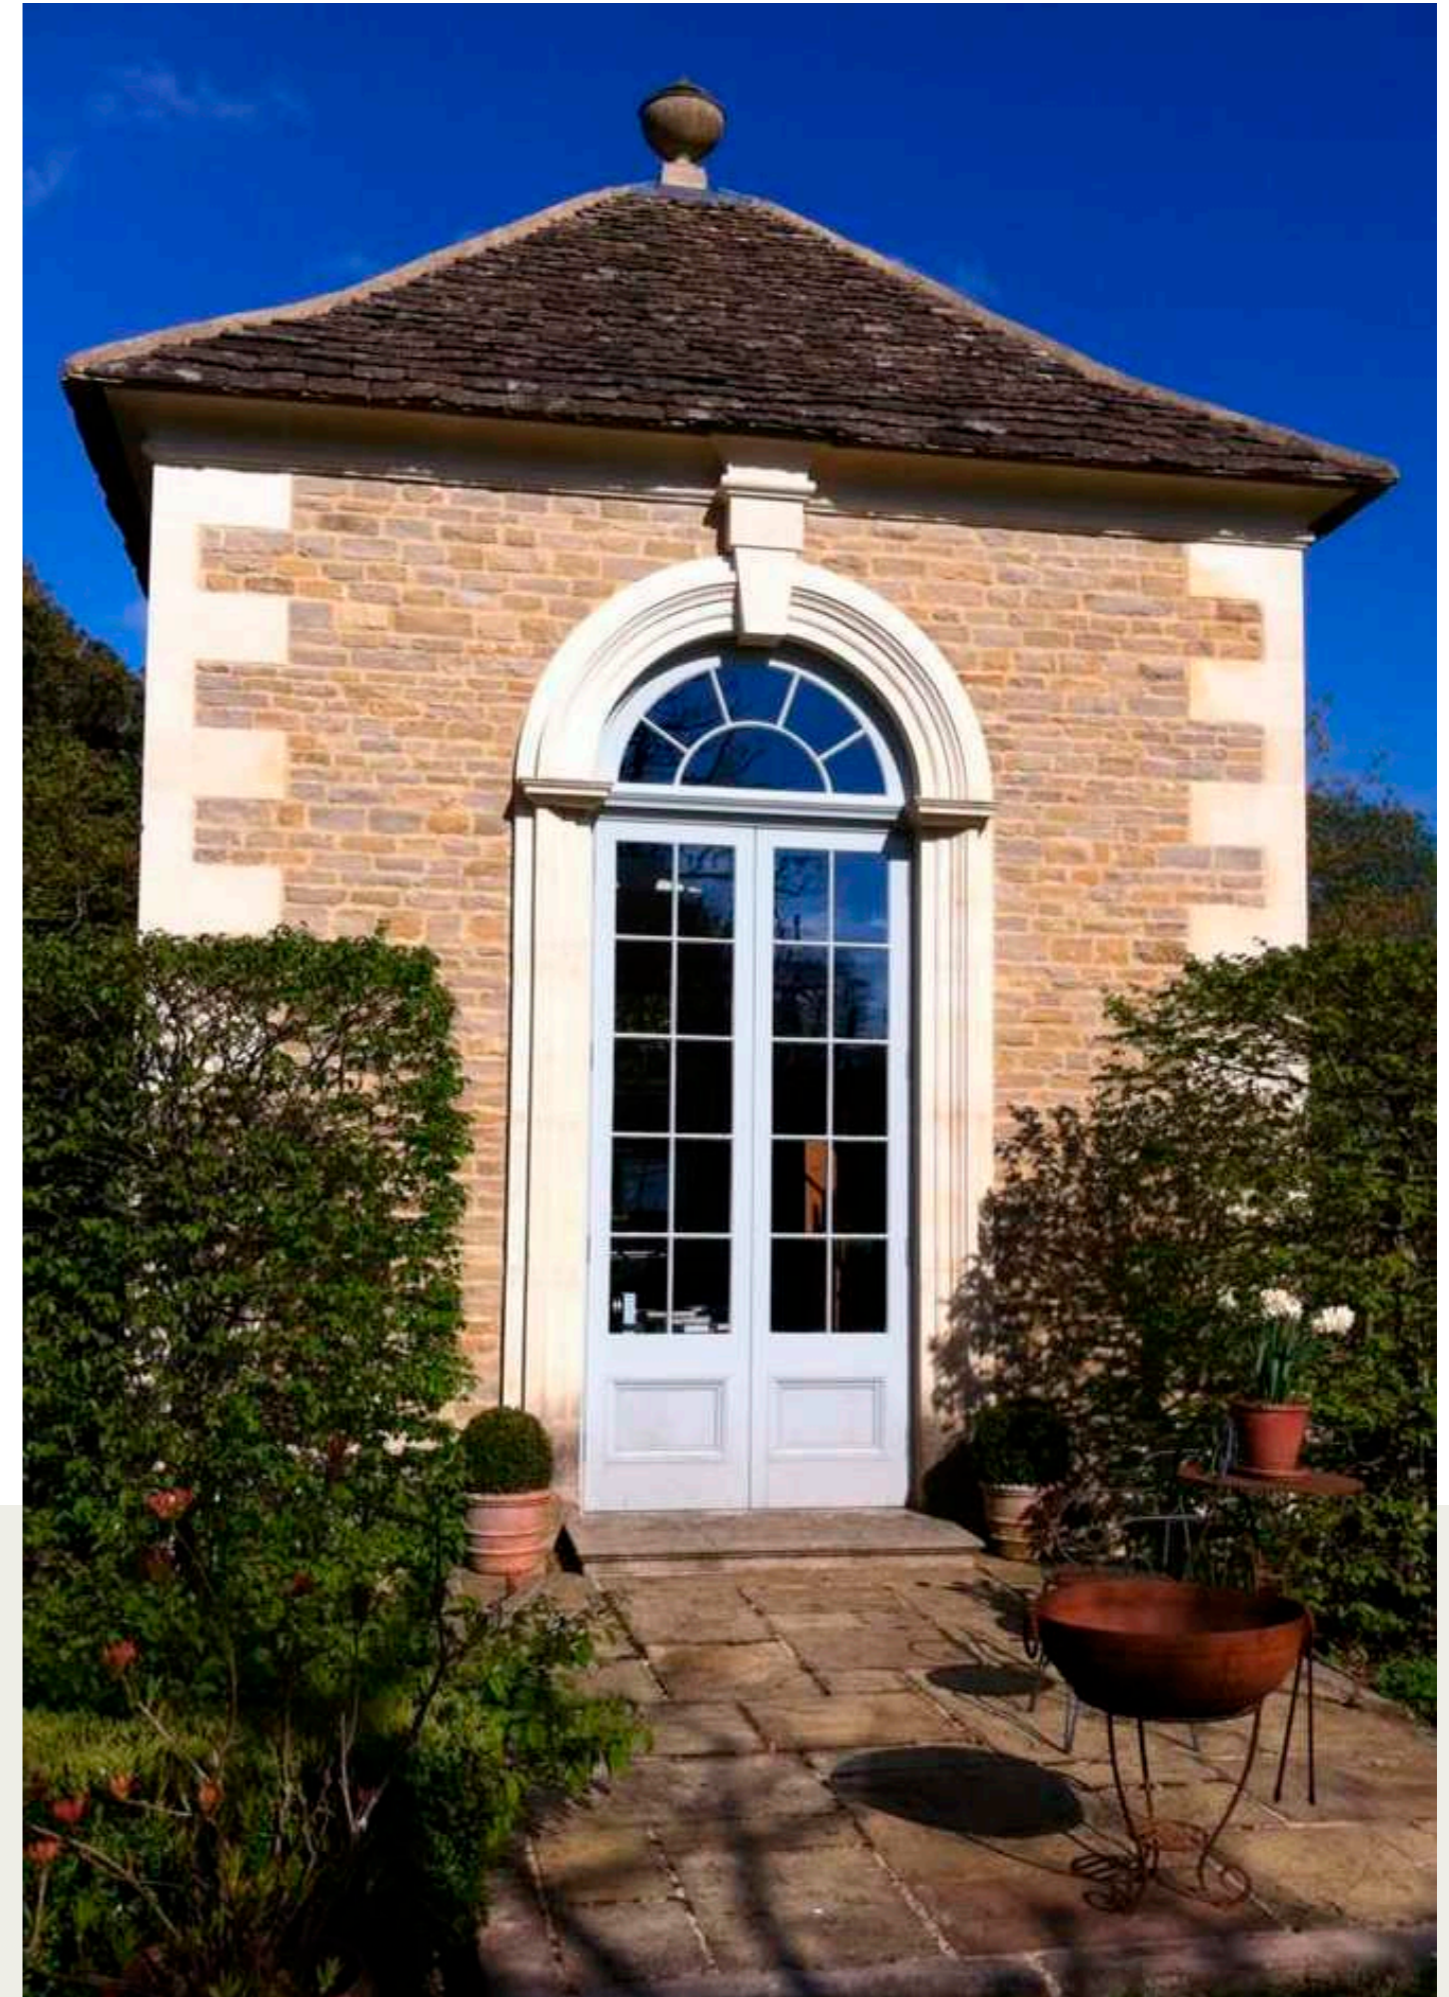

# Looking for something different?

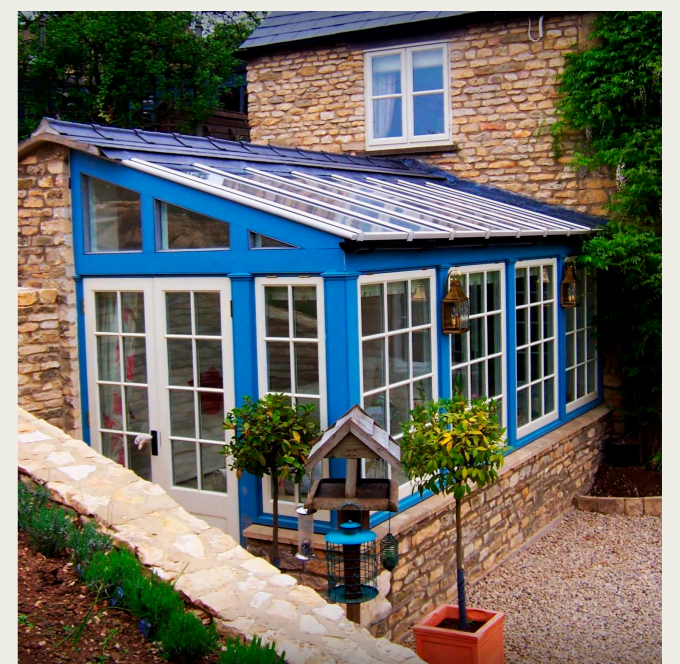

We have manufactured bespoke joinery for period and listed properties within the Cotswolds for over 40 years.

We can work with you to achieve your desired design.

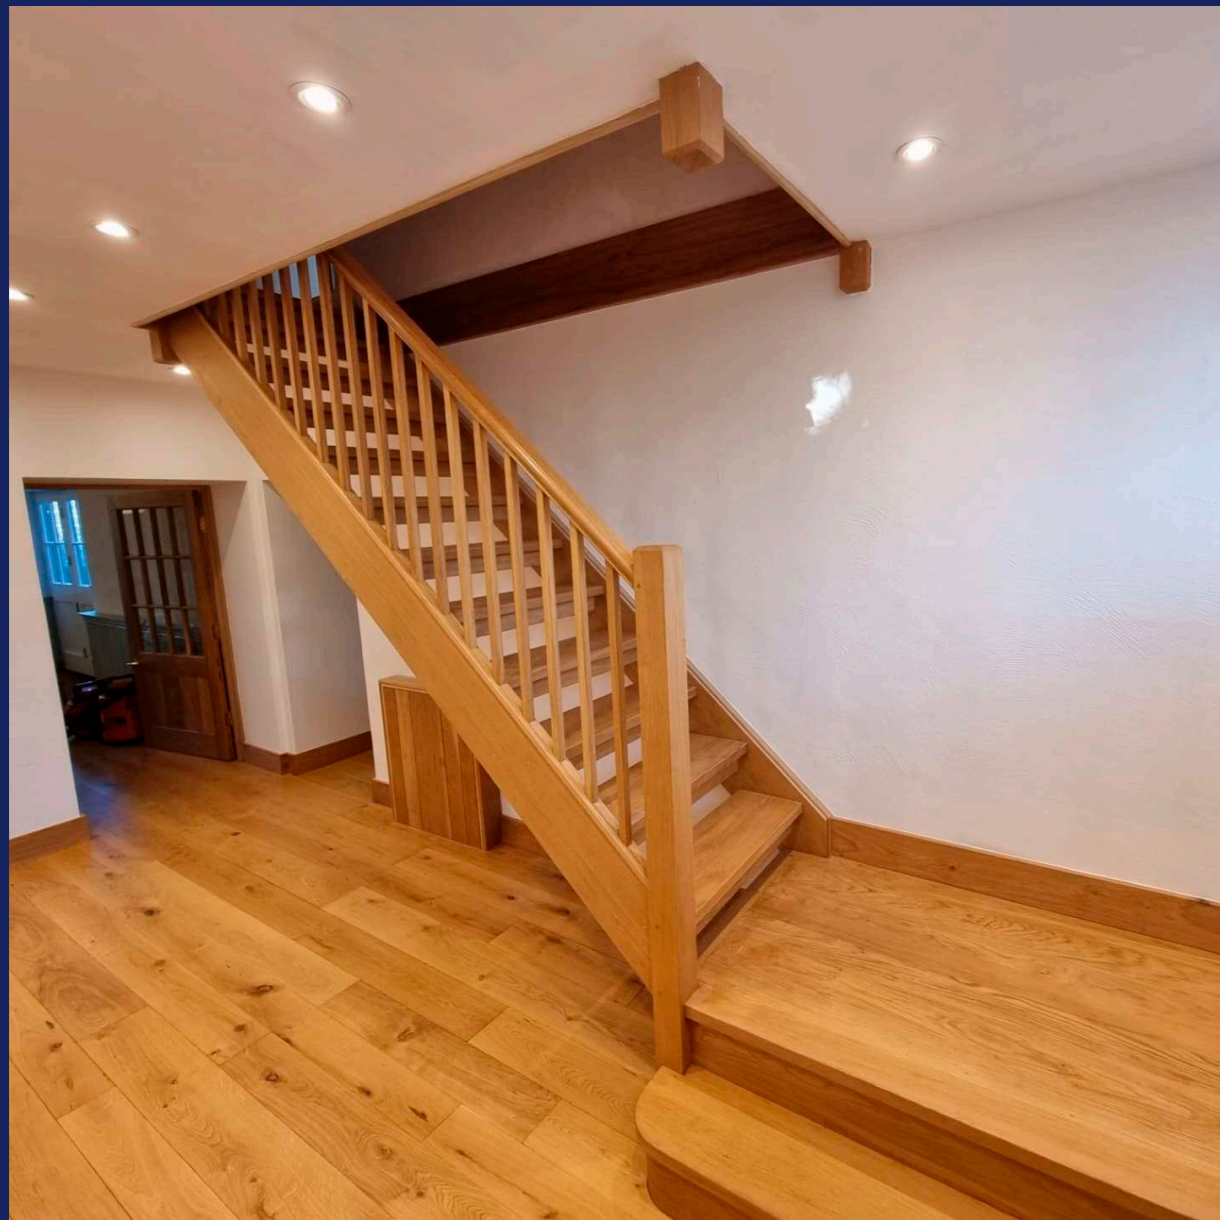

# Staircases

We can make your staircase in any specification or configuration. We can manufacture staircases using a combination of materials and finishes to achieve your desired look and feel.

At GK Joinery we pride ourselves on the quality of all our hand built products.

All of our staircases are expertly crafted and every component is fitted into place in our workshop to ensure the perfect hassle-free fit in your home.

# Staircases

## OPEN TREAD STAIRCASE –WITH CLOSED STRING

Open stairs have an open space where you would normally see a riser. Building Regulations stipulate that gaps should be no wider than 100mm so we use a riser downstand below the tread.

## CUT STRING STAIRCASE

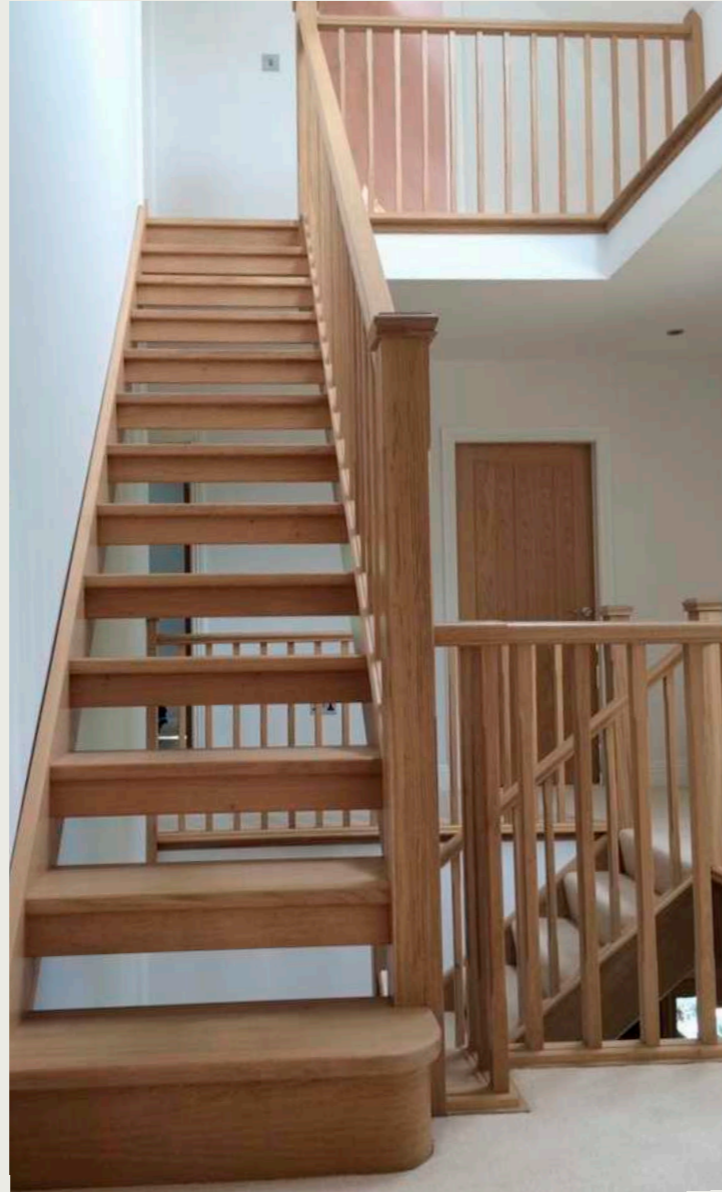

Cut string staircases offer a grand luxurious feel. The strings are cut to accommodate the treads and risers, brackets are often fitted for aesthetics.

## CLOSED STRING STAIRCASE

A closed string staircase is the most common design style of staircase. The strings enclosed the treads and risers which are housed into them and wedged in place.

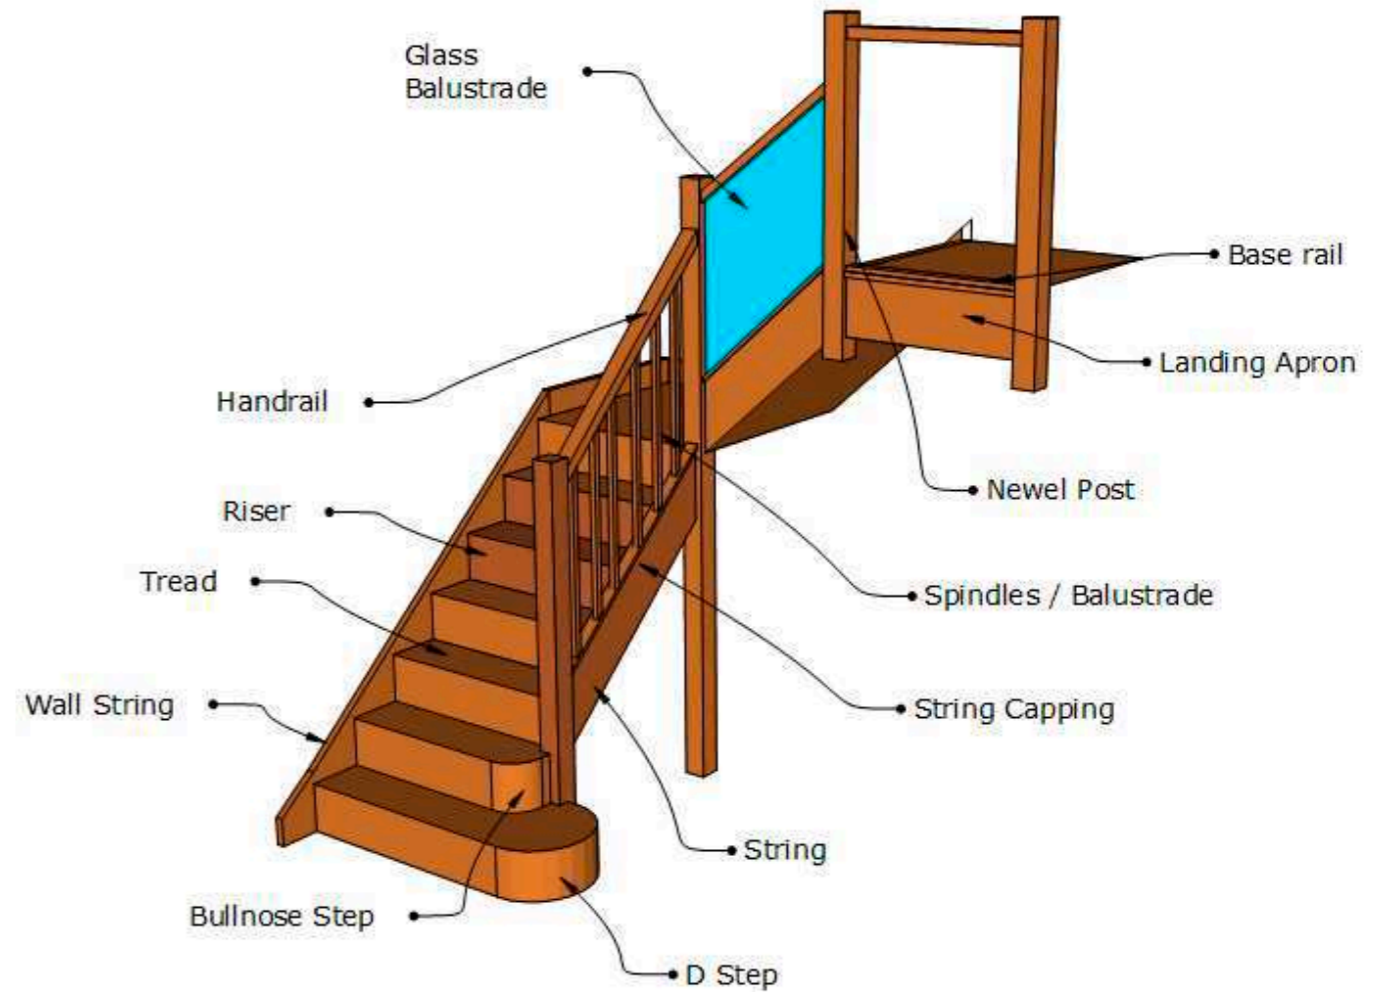

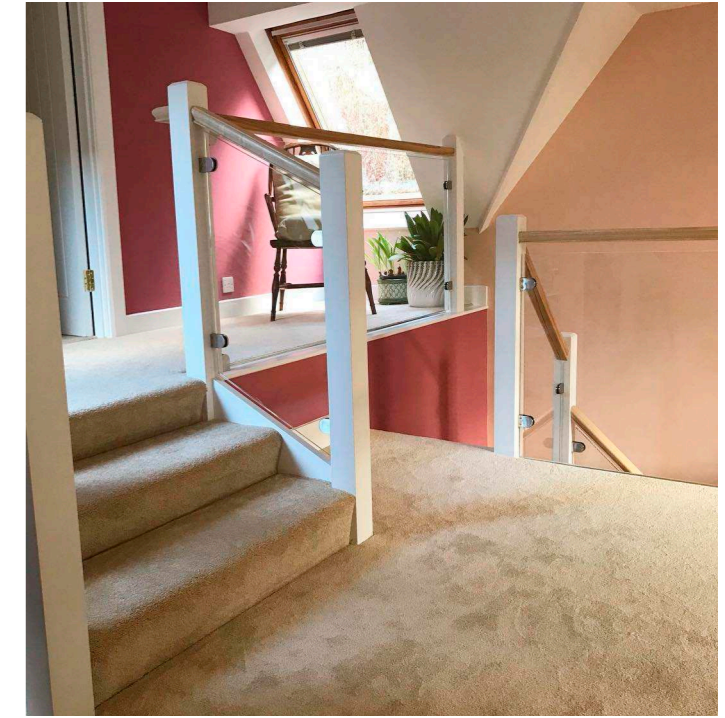

## BULL NOSE AND CURTAIL 'D' STEPS

These type of steps are entry steps at the bottom of a staircase. They offer a more open feel and increase entry room to the stairs.

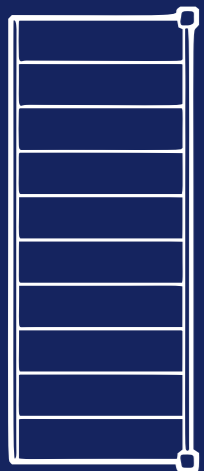

## Components of a Staircase

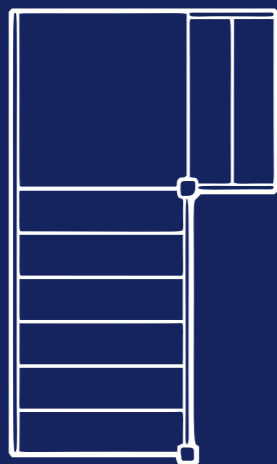

We hate jargon as much as the next person, but there are some industry standard terms that make it easier for us to understand each other.

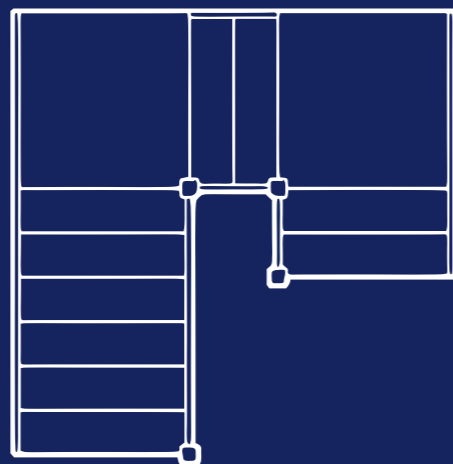

Straight Flight

Quarter Turn

Half Turn

Winder Staircase

# TIMBERS

We use a variety of sustainably sourced timbers.  
Here are some of our favourites

## Red Grandis

Red Grandis is GK's preferred hardwood for casements, windows, and door frames.

\*Engineered for strength and stability

\*Sustainable Ethically sourced 100% FSC® certified

Red Grandis is a wood that varies in colour from pink to white, cream to light rose; however, its claim to fame likely belongs to the fact that it is certifiably green. It is the trademarked name for hardwood from a plantation-grown Eucalyptus tree (Eucalyptus grandis) that boasts FSC certification.

## Accoya

All our external doors are manufactured in accoya to reduce the risk of seasonal movement. It can also be used for our casement and sliding sash windows. Accoya can be painted or stained.

Accoya brings unprecedented reliability for timber; trusted not to visibly swell, shrink or distort, with minimal movement. Highly durable, it withstands the test of any climate.

Accoya is the truly sustainable choice that helps you meet global challenges like climate change. From source to production and through to end of life, sustainability shines through. Accredited by the FSC® and Cradle to Cradle Gold certified™

**Sapele** Sapele is a timber originating from tropical Africa. A tight interlocking grain with a dark red colour that resembles mahogany. Recommended use for cills and thresholds.

**Iroko** Iroko has a medium to coarse texture, with open pores and an interlocked grain. The wood is tough, dense, and very durable. It is often used as a substitute for teak for its resemblance in both colour (light brown to deep golden-brown) and grain. Commonly used for gates.

**European Oak** Aside from the obvious physical advantages, appearance is one of the major reasons oak is so desirable as a building material. It naturally possesses a pleasing golden colour that dries to a pleasant silvery tone when untreated. We use oak for doors, windows, staircases and other internal joinery. When used externally coatings will need regular maintenance intervals.

**Ash** In general ash is a light-coloured wood, with sapwood varying from white to yellow and heartwood light to dark brown, sometimes with lighter streaks. Ash wood is generally straight-grained with a coarse uniform texture. No two pieces are ever the same in appearance. Ash is not for exterior use.

**Tulipwood (poplar)** Colour ranges from white to pale olive green or brown. It is straight-grained, of even texture and grain and relatively strong. Its main uses are in furniture, doors, panelling, architectural interior joinery and mouldings, and kitchen cabinets. The timber is typically painted. Tulipwood is not for exterior use.

**Redwood (softwood)** Redwood is a pine often referred to as Scots Pine. The sapwood is creamy-white to yellow in colour. We traditionally use redwood for skirtings, mouldings and stair components.

**We advise against using redwood externally.**

## KEY FEATURES & BENEFITS

DIMENSIONALLY STABLE

OUTSTANDING DURABILITY

PERFECT FOR COATING

# FINISHES

## Finishes

Our joinery is finished by our own in-house team using high-quality microporous products available. Our painted and translucent stain finishes for Accoya are spray applied and dried under controlled conditions.

For door frames with a painted finish, we stain our thresholds with a quality oil-based stain.

**On Accoya** BASE: Walnut TOP: Antiquw Oak  
**On Accoya** BASE: Dark Brown TOP: Walnut  
**On Accoya** BASE: Teak TOP: Walnut  
**On Accoya** BASE: Teak TOP: Nut  
**On Accoya** BASE: Teak TOP: Iroko  
**On Accoya** BASE: Cotswold Oak TOP: Cotswold Oak

## Dual Finish

We offer a dual colour finish where the exterior colour is different to the internal colour

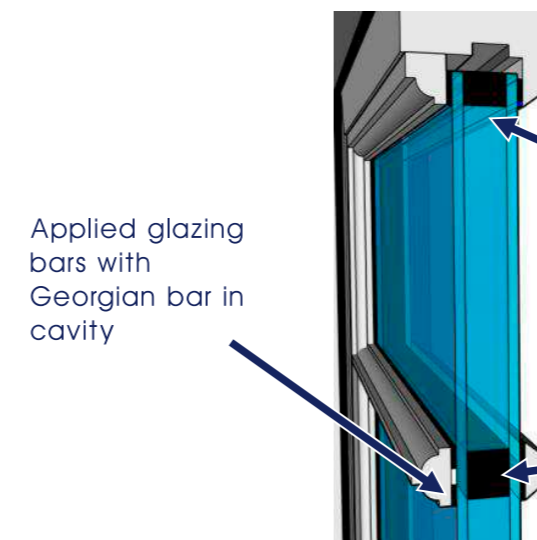

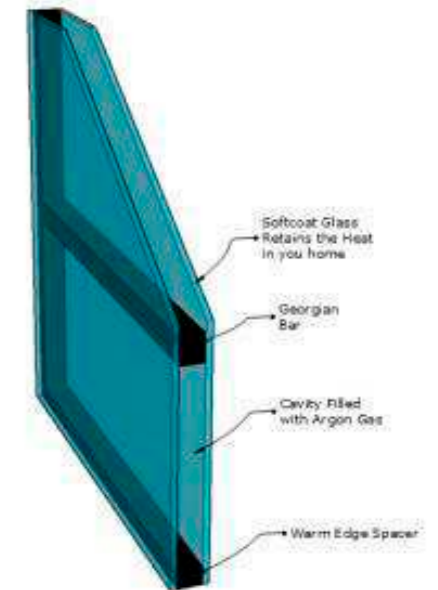

# GLASS

Our doors and windows come with energy efficient A-rated 24mm double glazing as standard. Using the latest technologies our glass has a U value of just 1.2.

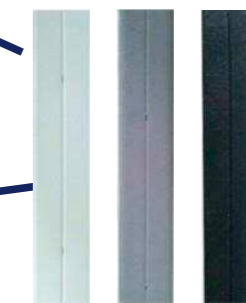

## Glass Options

GK also offer speciality glass such as leaded, frosted (satin), sand blasted detail i.e. for house numbers, acoustic, self-cleaning, anti-sun and more are available.

Applied glazing bars with Georgian bar in cavity

Warm edge spacer bars which make up the perimeter of the double glazing come in black as standard. White or grey are available by request

## Single Glazing & Slim Heritage Double Glazing

Details are paramount when retaining a buildings established appearance. Single and slim glazing can be used on listed buildings where standard double glazing options are not deemed suitable for either architectural, planning or conservation reasons.

Slim heritage glazing where permitted can be used to improve your homes thermal performance. With a small sightline and only a 4mm air gap it helps to retain the warmth in you home without compromising the visual appearance of your doors and windows. With a U Value of 1.9 using 4mm softcoat / 4mm cavity filled with Krypton gas / 4mm float, it improves single glazing 5.9 U Value
